

Mtendere Admin Training

Operating the live Mtendere Education Consult platform securely and confidently.

Training objectives

Navigate the admin portal, protect data, manage content, review applications, handle communications and know when to escalate.

Platform purpose

The admin portal supports scholarships, work abroad opportunities, events, articles, users, applications, subscribers, messages, analytics and platform settings.

Administrator responsibilities

Keep information accurate, respond quickly, protect personal data, use the correct role and maintain an audit trail.

Role boundaries

Super Admin owns users/settings; Admin runs operations;
Writer manages content; Viewer reviews dashboard only.

Security rules

Use named accounts, strong passwords, least privilege, no shared credentials, no private data in screenshots, and re-enable MFA in the next authentication update.

Login demonstration

Use the issued username and password. MFA is currently disabled for handoff but the setup workflow remains for future updates.

Admin sign-in page with username and password fields.

Mtendere Education Consult

Admin Management Platform

Manage scholarships, job opportunities, partners, blog content, and team members - all in one powerful dashboard.

- Full content management with rich text editing
- Role-based access control and team management
- Real-time analytics and application tracking
- Image uploads with automatic optimization

Dashboard tour

Start every admin session from the Dashboard and check current activity.

Navigation map

Use the left menu groups: Overview, Content, People, Intelligence and System.

Users

Only Super Admins create, deactivate and update administrator accounts.

Roles & Permissions

Use the role matrix to confirm access before assigning privileges.

Scholarships workflow

Create draft, complete fields, review, publish, update, unpublish or delete carefully.

Job Opportunities workflow

Maintain work abroad listings with verified deadlines and external links.

Job Opportunities management list.

Jobs Management

Build public job pages, role-specific forms, assessments, and candidate pipelines.

No data yet.

Application review

Admins and Super Admins review submissions, update status and record notes.

Messages and consultations

Review incoming enquiries, respond through verified channels and escalate sensitive cases.

Blog and resources

Writers prepare articles; publish only after checking image, title, content and links.

Events

Create and manage event records and registrations.

Partners

Maintain partner names, logos and public descriptions.

Team Members

Keep staff biographies and contact details accurate.

Subscribers

Respect consent, confirmation and unsubscribe request

Communications

Templates, campaigns and email audit depend on correct public action links.

Payments

Payment operations are configuration-dependent and require careful escalation.

Media Governance

Use approved images, avoid duplicate records and protect sensitive assets.

Analytics

Use analytics for operational trends, not formal financial statements.

Activity and audit

Review actions for accountability and troubleshooting.

AI Chat Assistant

Beta monitoring feature. Treat as incomplete until production-ready policies are confirmed.

Settings

Super Admins manage security, session, cache and platform controls.

Create/edit entry points

Look for Add, Create or New buttons; complete required fields before saving.

Responsive view

Administrators can review key information on mobile, but complex edits are safer on desktop.

Email link failures

If confirmation or unsubscribe links fail, stop campaigns and verify base URL, token route and deployed public page.

Application-processing workflow

Open record → review details → select status → add note
→ save → notify applicant.

Content publishing workflow

Draft → complete required fields → preview/review →
publish → verify public page → monitor expiry.

User access workflow

Identify duty → choose least-privilege role → create account
→ test access → deactivate when no longer needed.

Daily checklist

Dashboard, Applications, Messages, Subscribers, urgent deadlines and failed communications.

Weekly checklist

Activity, Analytics, stale records, expired opportunities, access review and broken links.

Monthly checklist

User audit, approved exports, media cleanup, data-protection review and platform improvement log.

Exercise 1

Log in, review Dashboard, identify one metric and one recent action.

Exercise 2

Create a draft scholarship, save it and explain what must be checked before publishing.

Exercise 3

Review an application, change status and add an internal note.

Exercise 4

Create a blog article with a featured image and preview it before publishing.

Exercise 5

Create a user and assign the lowest role that fits the scenario.

Knowledge check

Who can manage roles? Who reviews applications? What should happen when unsubscribe links fail?

Competency checklist

Trainee can navigate, protect data, complete workflows, troubleshoot and escalate.

Support and escalation

Capture page, timestamp, role, browser, exact error and sanitized screenshot; escalate to Chrispine Mndala / Aöthothe Technologies.

Closing

Operate carefully, document decisions and protect client trust.
