

Mtendere Education Consult Admin User Manual

Version 1.0 · 23 July 2026

Prepared for: Mtendere Education Consult

Prepared by: Chrispine Mndala / Aöthothe Technologies

This manual trains administrators to operate the live Mtendere Education Consult admin platform confidently, securely and efficiently.

Revision History

Version	Date	Prepared by	Summary
1.0	23 July 2026	Chrispine Mndala / Aöthothe Technologies	Initial manual generated from current admin portal audit and screenshots.

Table of Contents

1. Introduction and platform purpose
2. Roles and permissions
3. Secure login, logout, passwords and MFA
4. Dashboard overview
5. Module operating procedures
6. Applications and consultation workflows
7. Communications and subscribers
8. Payments, analytics and audit activity
9. Settings and security procedures
10. Troubleshooting, checklists, escalation, FAQ and glossary

Introduction and Platform Purpose

The Mtendere Education Consult platform supports scholarship, study abroad, work abroad, events, content, consultation and administrative operations. The admin portal is the control center for maintaining public records, reviewing user requests, communicating with clients and protecting sensitive data.

This manual documents features verified from the current admin source code and captured admin interface. Items marked incomplete, beta or configuration-dependent should not be presented to trainees as fully available production workflows.

Administrative Roles and Permissions

Role	Primary purpose	Typical access
Super Admin	Owens the platform, accounts, roles and settings.	All admin modules, including Users, Roles & Permissions and Settings.
Admin	Runs daily operations and reviews platform activity.	Applications, Messages, Subscribers, Communications, Analytics, Activity, Payments and content modules.
Writer / Content Manager	Maintains public content.	Scholarships, Job Opportunities, Events, Partners, Blog Posts, Team Members and Media Governance.
Viewer	Reads high-level operational status only.	Dashboard only.

Route access summary

Module	Route	Authorized roles	Purpose
Dashboard	/admin	viewer, writer, editor, admin, super_admin	Operational overview metrics and recent activity.
Ecosystem	/admin/ecosystem	admin, super_admin	Cross-platform ecosystem overview.
Analytics	/admin/analytics	admin, super_admin	Content, application and engagement reporting.
Activity	/admin/activity	admin, super_admin	Administrative activity and progress monitoring.
Scholarships	/admin/scholarships	writer, editor, admin, super_admin	Create, edit, publish, unpublish and maintain scholarship records.
Job Opportunities	/admin/jobs	writer, editor, admin, super_admin	Maintain work abroad and opportunity listings.
Events	/admin/events	writer, editor, admin, super_admin	Manage events and registrations.
Partners	/admin/partners	writer, editor, admin, super_admin	Manage partner organisation records.
Blog Posts	/admin/blog	writer, editor, admin, super_admin	Create and manage articles/resources.
Team Members	/admin/team	writer, editor, admin, super_admin	Maintain public staff/team records.

Media Governance	/admin/media	writer, editor, admin, super_admin	Review media assets and usage governance.
Users	/admin/users	super_admin	Create and maintain administrator accounts.
Applications	/admin/applications	admin, super_admin	Review submitted applications and change statuses.
Payments	/admin/payments	admin, super_admin	Payment and transaction operations where Stripe is configured.
Communications	/admin/communications	admin, super_admin	Templates, campaigns, workflow and communication audit.
Subscribers	/admin/subscribers	admin, super_admin	Newsletter subscriber review and export.
Messages	/admin/messages	admin, super_admin	Consultation/contact request inbox.
Roles & Permissions	/admin/roles	super_admin	Role and permission boundary review.
AI Chat Assistant	/admin/ai-chat	admin, super_admin	Beta monitoring page for AI assistant activity.
Settings	/admin/settings	super_admin	Security, sessions, cache and platform configuration.

Secure Login, Logout, Passwords, MFA and Recovery

Sign in to the admin portal

Purpose: Verify identity before allowing access to the administration console.

Authorized users: All active administrator roles

Where to find it: Admin login page

Required information: Username and password issued by the super administrator.

1. Open the admin portal login page.
2. Enter the exact Username.
3. Enter the Password.
4. Select Sign In.
5. If MFA is enabled, enter the six-digit authenticator code.

Expected result: The administrator lands on the Dashboard or the highest permitted page.

Common mistakes: Using an email address when the account requires a username; typing an old password; using an expired MFA code.

Security warning: Never paste passwords, tokens, MFA secrets or applicant private data into public notes or screenshots.

Troubleshooting: Check account status with the Super Admin; reset the password if needed; verify that MFA is currently configured correctly.

MFA status: MFA is currently disabled for administrator handoff/use with available credentials. The MFA setup screen exists and should be re-enabled in a future security update after credentials, QR labels and recovery procedures are finalized.

Dashboard Overview

The Dashboard gives administrators a quick health check of operational activity. Viewer accounts are restricted to this area. Admins and super admins should review dashboard metrics at the start of each working day.

Module Operating Procedures

Create, edit, publish, unpublish or delete content records

Purpose: Keep public information accurate and current.

Authorized users: Writer / Content Manager, Editor, Admin, Super Admin

Where to find it: Scholarships, Job Opportunities, Events, Partners, Blog Posts, Team Members or Media Governance

Required information: Title/name, description, category, dates/deadlines, images where required, publication status and any external links.

1. Open the relevant content module.
2. Select Add, Create or New where available.
3. Complete all required fields.
4. Save as draft if the record still needs review.
5. Preview or review the record.
6. Publish only after verifying dates, spelling, eligibility and links.
7. Use Unpublish instead of Delete when a record may need to be restored.

Expected result: The record appears in the module list and, when published, on the public website.

Common mistakes: Publishing with missing deadlines; uploading unclear images; deleting records instead of archiving/unpublishing; pasting unverified external links.

Security warning: Never paste passwords, tokens, MFA secrets or applicant private data into public notes or screenshots.

Troubleshooting: If Save fails, check required fields and network status. If the public page does not update immediately, refresh the cache or check Settings/cache controls.

Manage users and assign administrative roles

Purpose: Give staff the minimum access needed for their duties.

Authorized users: Super Admin only

Where to find it: Users and Roles & Permissions

Required information: Name, username, email, temporary password, active status and correct role.

1. Open Users.
2. Create or edit the administrator account.
3. Choose the role that matches the person's responsibilities.
4. Save the account.
5. Confirm access by signing in with the test account or reviewing role boundaries.
6. Deactivate accounts immediately when staff leave or change duties.

Expected result: The user can access only the modules allowed by the assigned role.

Common mistakes: Giving Super Admin access for routine content work; leaving inactive accounts enabled; sharing one account among multiple staff.

Security warning: Never paste passwords, tokens, MFA secrets or applicant private data into public notes or screenshots.

Troubleshooting: If the user sees Access denied, compare their role against the role access summary. If they can access too much, reduce the role immediately.

Review applications and change status

Purpose: Process submitted scholarship, study abroad, work abroad or service applications.

Authorized users: Admin and Super Admin

Where to find it: Applications

Required information: Applicant record, current status, review decision, internal note and supporting documents where available.

1. Open Applications.
2. Search or filter for the applicant.
3. Open the application details.
4. Review submitted information carefully.
5. Change the status to the appropriate stage.
6. Record an internal note explaining the decision.
7. Save the change and notify the applicant through the approved communication channel.

Expected result: The application status is updated and the administrative record is traceable.

Common mistakes: Changing status without notes; exposing applicant private information; making decisions from incomplete records.

Security warning: Never paste passwords, tokens, MFA secrets or applicant private data into public notes or screenshots.

Troubleshooting: If status does not save, retry after refreshing. If the applicant cannot be located, search by name, email and date submitted.

Respond to consultation and assessment requests

Purpose: Convert incoming enquiries into timely follow-up actions.

Authorized users: Admin and Super Admin

Where to find it: Messages

Required information: Client name, contact channel, request type, message content and response status.

1. Open Messages.
2. Review new requests.
3. Prioritize urgent or high-value enquiries.
4. Respond using verified contact details.
5. Mark the request as handled where the UI supports it.
6. Escalate technical, payment or sensitive cases to the appropriate owner.

Expected result: The request is handled and no enquiry is left unanswered.

Common mistakes: Replying to unverified contact details; leaving handled messages unmarked; copying private data into unsecured tools.

Security warning: Never paste passwords, tokens, MFA secrets or applicant private data into public notes or screenshots.

Troubleshooting: If outgoing email links fail, use the Communications audit and dry-run logs to confirm template URLs and tokens.

Manage newsletter subscribers

Purpose: Maintain opt-in subscriber records and respect unsubscribe choices.

Authorized users: Admin and Super Admin

Where to find it: Subscribers

Required information: Subscriber email/status, consent source and requested action.

1. Open Subscribers.

2. Search for the subscriber.
3. Review subscription status.
4. Export reports only when authorized.
5. Honor unsubscribe or deletion requests according to data-protection procedures.

Expected result: Subscriber records stay accurate and compliant.

Common mistakes: Re-subscribing users without consent; exporting lists to personal devices; ignoring unsubscribe requests.

Security warning: Never paste passwords, tokens, MFA secrets or applicant private data into public notes or screenshots.

Troubleshooting: If confirmation or unsubscribe links fail, verify that public email action routes and base URL configuration are deployed.

Export reports

Purpose: Create operational reports for management review.

Authorized users: Admin and Super Admin where export controls are available

Where to find it: Applications, Subscribers, Analytics or Payments

Required information: Report type, date range, filters and approved storage location.

1. Open the relevant reporting module.
2. Apply date range and filters.
3. Select Export if available.
4. Store the file in the approved business location.
5. Delete temporary copies from personal downloads folders.

Expected result: A report is available for business use without unnecessary data exposure.

Common mistakes: Exporting all records when a filtered report is enough; sharing spreadsheets by personal email.

Security warning: Never paste passwords, tokens, MFA secrets or applicant private data into public notes or screenshots.

Troubleshooting: If Export is missing, the feature may be incomplete or role-restricted; escalate to the technical owner.

Email, Notification and Alert Management

Communications includes templates, campaigns, workflow and audit. Email confirmation, unsubscribe and event action links depend on correct base URL configuration and matching public routes. If a link redirects to a missing page, verify the configured public URL, route handler and token expiry before sending more campaigns.

Payments, Media, Analytics, Audit Logs and Settings

Payments: Payment and transaction management is available where Stripe/payment configuration is present. Treat it as configuration-dependent.

Media Governance: Use approved images only and review duplicates. The audit found repeated media keys in the current interface; this should be cleaned up to avoid confusing administrators.

Analytics: Use Analytics for trend monitoring. Do not treat dashboard numbers as audited financial statements.

Activity: Use Activity to review administrative progress and accountability.

Settings: Super Admins use Settings for security, sessions, cache and platform controls. Changes can affect all users.

Security and Data-Protection Procedures

- Use named accounts only; never share admin logins.
- Use the lowest role that allows the work.
- Do not expose passwords, MFA secrets, reset links, payment data or applicant documents in screenshots.
- Export personal data only for an approved business purpose.
- Deactivate unused administrator accounts promptly.
- Re-enable MFA after the next authentication-hardening update and test recovery codes before enforcing it.

Common Errors and Troubleshooting

Symptom	Likely cause	Action
Access denied	Role does not permit the route.	Ask the Super Admin to verify the assigned role.
Email action link opens a missing page	Base URL or public route mismatch.	Check template link generation, deployed public route and token handler.
MFA setup appears unexpectedly	MFA enforcement was enabled.	Use the configured authenticator app or temporarily disable only during controlled handoff.
Save button fails	Required field, validation, API or session issue.	Check visible validation errors, refresh, sign in again, then escalate with screenshot and timestamp.
Payment page missing data	Stripe/payment environment not configured.	Escalate to technical support before changing payment settings.

Administrator Checklists

Daily

- Log in and review Dashboard.
- Check Applications and Messages.
- Review new Subscribers and Communications alerts.
- Confirm urgent content deadlines.

Weekly

- Review Activity and Analytics.
- Check published scholarships, jobs and events for expired items.
- Verify user access for current staff duties.

Monthly

- Audit administrator accounts.
- Export approved management reports.
- Review data-protection and backup practices.
- Confirm broken links and media duplicates are resolved.

Practical Training Exercises and Knowledge Checks

1. Log in and review the Dashboard. Expected result: trainee can identify key metrics and recent activity.
2. Create a draft scholarship. Expected result: saved draft with complete required fields.
3. Preview and publish the scholarship. Expected result: public-ready listing appears as published.
4. Review a submitted application and change its status with an internal note.
5. Add a blog article with a featured image.
6. Review a consultation request and identify the appropriate response path.
7. Export an administrative report where the Export button is available.
8. Create a user and assign the correct role.
9. Locate a specific action in Activity/audit records.

Assessment criteria: The trainee uses the correct role, avoids exposing private data, completes required fields, records decisions, and can explain what to escalate.

Knowledge-check answers: Super Admin manages roles/settings; Admin reviews applications/messages/subscribers; Writer manages content; Viewer sees Dashboard only; MFA should be re-enabled after the next authentication update; unsubscribe requests must be honored.

Escalation and Technical Support

For platform bugs, broken email links, failed payments, access issues or security incidents, capture the page name, time, account role, browser, exact error message and screenshot with sensitive data hidden. Escalate to Chrispine Mndala / Aöthothe Technologies for technical review.

Frequently Asked Questions

Can a Writer approve applications? No. Application review is restricted to Admin and Super Admin.

Can a Viewer change content? No. Viewer access is dashboard-only.

Should MFA remain disabled? No. It is disabled for the current handoff but should return in the next security update after recovery and setup procedures are complete.

Glossary

Term	Meaning
MFA	Multi-factor authentication using a six-digit authenticator code.
RBAC	Role-based access control.
Draft	A saved record not yet public.
Published	A record visible to public users where supported.
Audit activity	Traceable administrative actions used for accountability.
